DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a method for computing a jitter sub-pixel sample position for reducing aliasing, classified in class 345, subclass 613.
- II. Claims 11-15, drawn to a programmable sample generation unit for producing at least two sub-pixel sample positions, classified in class 345, subclass 582.
- III. Claims 16-20, drawn to a programmable graphics processor having a raster operations unit configured to produce sub-pixel depth values, classified in class 345, subclass 422.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method for computing a jitter sub-pixel position without a programmable sample generation unit for producing at least two sub-pixel sample positions, or a programmable graphics processor having a raster operations unit configured to produce sub-pixel depth values. In other words, each one of the inventions recited in groups I, II, and III is separately usable in a system not having the other. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
